

Event Title: EDUCATIONAL EVENT NO. 1 – PRESENTATION OF EDUCATION MATERIAL TO THE TEACHERS

Overview	
Date	18.02.2021
Location	Kadyny
Aim of the event	Practical familiarization of the educators in working with these materials should support will be use and contribute to an increase educator's interest in providing lessons on the circular economy, the UN Sustainable Development Goals and the blue economy.

Short summary

Taking advantage of a short time opportunity to conduct the activities face to face, a meeting with teachers was held, during which educational materials and presentations prepared in the project were presented. All rules of hygienic safety and social distance provided for such meetings were filled.

Teachers who had signed up in advance and will participate in the summer school and other teachers interested in the subject were invited. In order to start the meeting in time to allow for its possible extension, the participants were invited to have a meal (allowed under sanitary conditions as being served in seclusion). In this way, teachers were able to attend the event immediately after school activities.

It was planned to meet in a small (allowed in pandemia) group, with keeping a sanitary regime. After a brief introduction of the participants, the objectives of the project and the work already done were presented, as well as the purpose of the educational activities that will be held by the teachers.

Using the example of a presentation on bioeconomy in the fishery sector, the method of presentation was presented, discussing how the prepared information can be used in educational events. The possibilities of using the Mentimeter application were also pointed out. This was followed by a game simulation in groups, using the participants as players. A set of materials was prepared to discuss each game in detail and check its usefulness. The meeting ended with a series of questions and comments, as well as a discussion on the possibilities of carrying out activities in schools.

The exemplary presentation aroused interest in its content and concise message supported by examples. Such a form was liked by the participants and it should also reach the awareness of the youth. The comments

allowing to understand the content were considered relevant and helpful. Also the Mentimeter application was considered to enrich the message by increasing the communication with the audience.

Practical workshops with games were considered as the best part of the meeting and an appropriate tool to stimulate the activity of participants during educational activities. One of the teachers, who conducts classes with younger children, noticed the problem of too much text and offered to adapt games for younger age groups to use in educational activities conducted by his foundation (Association for the Coast, <http://narzeczwybrzeza.eu/>)

Attendees noted the good quality of the presentations and materials. When asked for critical remarks, they pointed out that the value expressed in GB currency was incomprehensible for most audience in Europe, or that the product descriptions were too long, which could lower the level of interest in the game itself. The training helped to systematize knowledge and prepare for teaching young people.

The mainstream of the discussion was related to the possibilities of real use of the materials in educational activities

Agenda

Agenda
